(This outline is based on Chapter 8 in Friedman & Sunder.)

**How to prepare a report for your Group Experiment and Group Project:**

Your report should involve the following sections.

*Introduction:*
State your question. Describe the relevance of your study by giving some background information. You can also provide information about important results from previous studies dealing with the same problem or with related problems.

*Procedures:*
Describe the experimental setup, the treatments and the parameter set you are using. Give information about the subject pool, laboratory and/or the environment.

*Theory and Hypotheses:*
Outline the relevant theories about the behavior in your setup. State the behavioral hypotheses.

*Results:*
Provide a descriptive data analysis with summary statistics and graphs. Conduct non-parametric tests and regressions to reach conclusions and test your hypotheses.

*Conclusion:*
Describe your main findings and state their economic implications

*Appendices:*
Provide documentation about the treatments used in the experiment.
